

Supplementary Fig 1 DNA-PK is not required for apoptosis in intestinal adenomas. (A) H&E stained sections of intestinal adenomas from unirradiated (no IR) or irradiated (IR) *scid/scid* *ApcMin/+* and *ApcMin/+* (WT) mice. Upper photographs were taken from 40x fields and middle and lower panels from 60x fields. Open arrow points to a mitotic cell and black arrowheads point to apoptotic cells. (B) Quantification of apoptotic cells in intestinal adenomas from *ApcMin/+* mice. Bars show the mean values plus standard deviations from 3 mice per genotype and 8-10 tumors per mouse. IR: irradiation.
